

Windbubble Size Guide

Our Windbubbles will give you the best wind protection you can get for your lavalier mic. Whatever the make, shape or size of it, we have made a furry Windbubble to fit, just waiting to keep the wind out and the clean, clear sound frequencies in.

There are four sizes, with the internal 'Bubble of dead air', opening and length of fur increasing progressively with each step. If your mic fits in more than one, for example the DPA 4060 which fits with both sizes 2 and 3, you will achieve greater wind resistance with larger Windbubbles because of the longer fur, though will in turn compromise a little on visibility.

For help on how to mount your Windbubble correctly, [click here](#).

Mic not listed above?

We'll keep testing and keep this chart updated as often as possible, but if your lav mic isn't listed here, never fear, [click here](#) for a guide on working it out yourself. We'd also be super happy to add it if you let us know which mic isn't listed via our [contact page](#).
