DESCRIPTION

The C8 is the largest and most powerful Cannon Coaxial model. C8 utilizes an 8" low-frequency driver with a concentrically-mounted compression driver, the latter coupled with a 90° × 60° wave guide, to help focalize the coverage where it is needed and reduce reflections from ceilings or overhangs. The enclosure also incorporates a rear-facing 7" passive radiator specifically tuned to extend the bass frequency response. These features allow the C8 to provide a full-range bandwidth and up to 120 dB SPL, all with high-fidelity sound quality.

The C8 has two Speakon connectors and a 2-circuit switch, which allows for a choice between two different amplified signals via a single, 4-conductor cable. The C8 is also available in the passive C8i installation version which features a screw terminal block connector, as well as the passive C8m version with a marine grade cable gland and all stainless steel 316 metal parts.
